/note="Vector: lambda ZAP Express/pBK-CMV; Site_1: EcoRl
/soften DNA library was generated using the ZAP-cDNA method organ cDNA library was generated using the ZAP-cDNA method by Stratagene. First strand cDNA synthesis was primed with a a 50 bp linker primer containing an oligo dT sequence preceded by a synthetic XhoI site. 5 prime adaptors were used containing an EcoRl cohesive end. The finished cDNAs were inserted in to the ZAP express vector unidirectionally in the sense orientation with respect to the lack promocer of pBK-CMV. An amphified library was prepared from approximately 3 million primary clones in the lambda ZAP Express vector. In vivo excision was then used to generate individual pBK-CMV phagemid clones for

/clone_lib="Organ: brain; Vector: pYX-Asc; Site_l: EcoR I;
/site_2: Not l: The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured mRNa was size fractionated on a 1% agarcee gel. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cond primer accordaning a Not I site. Double stranded cond primer accordaning a Not I site. Double stranded cond with EcoR I adaptor, digested with Not I, and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CAGCCACGAC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

//dep in="1" (Tipe library was constructed according
Stre 2: Not 1, The library was constructed according
Bonaldo. Lennon and size fractionated on a 1% agarose
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with Notl and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    744 bp mRNA linear EST 28-MAR-2003

ed. No. is the number of results predicted by chance to have a ore greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                    e present invention describes an F-box motif protein of ubiquitin gase SCF complex which promotes the ubiquitination of IkappaB or ta-catenin and is constituted by Skpl protein, Cull protein and a mplex (SCF complex) of F-box protein containing F-box motif and Wato peat motif and has the amino acid sequence of 45 residues (ABB1881) one of two ScP residue sequences (AAB12812, which is mouse ubiquitin gase FWD1 protein) and (AAB12813, which is human beta-transducin peat containing protein (beta-TrCP). The F-box protein can be used for e gene therapy of colon cancer by baing recombined to a virus vector. esent invention.

The protein directs proteins to the proteosome radation pathways. The protein is able to interact with the Vpu tein of human immune deficiency virus-1 (HIV-1), cellular proteins ppaB or beta-catenin (bC) and/or protein Skplp. The protein controls quitinylation of phosphorylated protein and thus their targeting to teosomes for degradation. Depending on Whether the process is thibited or promoted, the result may be delayed breakdown of Cp4 (in es of HIV-1 infection); increased activity of IkB (and thus reduced ivity of NFkappaB) and increased degradation of mutant bC in tumour
